[LinkedIn](#) ♦ [Github](#) ♦ [LeetCode](#)

EDUCATION

Bachelor of Technology, SRM Institute of Science and Technology
Computer Science (Core) — 8.95 CGPA

Expected 2028

SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, SQL

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Design

Technical Skills: Data Science, Machine Learning, AI, Predictive Analytics, Prompt Engineering, LLM Fine-tuning, Tableau

Web & Frameworks: React, FastAPI

Data & Analytics: Pandas, NumPy, PostgreSQL, Data Analysis, Statistics, Jupyter Notebook

Tools & Platforms: Git, Linux, VS Code, Cloud Computing, Agile Methodologies, Software Development Life Cycle

Soft Skills: Communication Skills, Cross-Functional Collaboration, Change Management, Critical Thinking

EXPERIENCE

Google Summer of Code 2025 (GNU Radio)

Jun 2025 - Oct 2025

Open Source Contributor

[Github](#) / [Certificate](#)

- Conducted research on automated 5G NR cell detection pipelines using Python and GNU Radio, validating synchronization strategies against **3GPP** specifications.
- Designed and evaluated PSS/SSS detection and timing-alignment algorithms, analyzing detection accuracy and robustness across varying SNR and channel conditions.

PROJECTS

AI Finance Voice Assistant

[Github](#)

- Built a voice finance assistant that answers spending and subscription questions, by combining a multi-agent backend (research, finance, and editor agents) with a Groq-hosted LLM and a retrieval-grounded (RAG) answer layer.
- Made the assistant usable hands-free, by adding a voice input/output loop and a React + TypeScript chat UI.
- Tech Stack: **Python, FastAPI, React, TypeScript, RAG, Multi-Agent Systems, Prompt Engineering, Plaid API**

Catto (AI-Powered Browser Extension)

[Github](#)

- Enabled AI-powered, in-page assistance on any website, by building a Chrome/Edge extension that reads live webpage content and DOM structure.
- Let users ask questions and edit page content in natural language, by building a floating AI chat widget.
- Tech Stack: **JavaScript, Chrome Extension APIs, AI/LLM Integration, DOM Manipulation**

RAG Evaluation Pipeline for K-12 Curriculum Search

- Built an automated RAG evaluation pipeline for a K-12 curriculum search API covering 1,041 chapters across 26 subjects, by auto-generating and quality-filtering its own eval set from source textbooks via a two-model generate-and-critique loop.
- Surfaced a subject-wide indexing defect (20 chapters scoring 1.0/5) and disproved the value of the reranking stage (4.60 vs. 4.59 across 228 matched runs), via LLM-as-judge scoring on correctness, faithfulness, and retrieval quality.
- Tech Stack: **Python, RAG, LLM-as-Judge Evaluation, Prompt Engineering, Data Pipelines**

EXTRA-CURRICULAR ACTIVITIES

- McKinsey Forward Program** – Selected for McKinsey & Company’s global learning program focused on structured problem solving, data-driven decision making, communication, adaptability, and practical business skills through hands-on modules and real-world case exercises. [Badge](#)
- Google Cloud – Generative AI Explorer (Vertex AI)** – Completed a Google Cloud Skills Boost badge on generative AI fundamentals and applications using Vertex AI. [Certificate](#)

LEADERSHIP

- Deputy Secretary General**, Birla Public School Model United Nations 2022 – Led the organization and execution of a large-scale interschool conference, coordinating committees, delegates, scheduling, communication, and operational management.
